Sammy Tech Online Store

System User Guide | Internet and Starlink Accessories Store - Juba, South Sudan

This guide explains how customers and Sammy Tech staff use the completed online store. It covers shopping, payment, order tracking, stock management, installation requests, and reporting.

Quick access	Address / purpose
Customer storefront	http://localhost/sammy_tech_store/ - Browse products, add to cart, checkout, and track orders.
Staff sign-in	http://localhost/sammy_tech_store/admin/login.php - Manage orders, stock, payments, installations, and reports.

1. Customer Guide

Customers do not need an account. They can buy as guests using a phone number and an order number.

Browse and add products

- Open the storefront and use the category buttons to filter Starlink Kits, Routers and Wi-Fi, Accessories, or Installation.
- Open the product card, check the USD price and estimated SSP equivalent, then select **Add to cart**.
- The cart keeps multiple products together until the customer is ready to checkout.

Manage the cart

- Use the quantity control to change an item quantity and select **Update**.
- Select **Remove** to remove an item. The cart total updates automatically.
- Select **Proceed to checkout** when the chosen items are correct.

Checkout and payment

At checkout, enter full name, phone number, optional email, and optional alternative phone. Choose pickup or delivery. Delivery requires an area and landmark/address.

Payment choice	Allowed payment method	What the customer sees
USD	Cash or bank transfer	USD bank account: **2010111329047**. A reference number and payment proof can be attached.

Payment choice	Allowed payment method	What the customer sees
SSP	Cash only	The system calculates the SSP value at **1 USD = 7,800 SSP**. Bank transfer is automatically disabled.

Payment support: 0921628884 | 0917603094 | WhatsApp +211 981 628 884.

Track an order and print a receipt

- After checkout, save the generated order number beginning with ST-.
- Open **Track order**, enter the order number and the same phone number used during checkout.
- The tracking result shows order status, payment status, items, and total. Select **Print receipt** for a printable receipt.

2. Staff Guide

Create the first staff account once from PowerShell before using the dashboard:

```
cd C:\wamp64\www\sammy_tech_store
php scripts/create_admin.php sammy-admin YourSecurePassword123
```

Dashboard

- Sign in with the staff account. The dashboard shows new orders, pending payments, low-stock products, and completed sales revenue.
- Use the order queue to update order status and payment status. Open the order management page for full customer, payment, and proof details.
- Use the stock watch list to identify products at or below their reorder level.

Order processing and stock safety

Orders begin as **new** and payments begin as **pending**. Stock is intentionally not deducted at checkout. This protects inventory when a customer abandons or cancels an order.

Staff action	System result
Confirm order	The system locks product stock, checks availability, deducts quantities, and records an OUT stock movement.
Move to processing / ready / completed	Updates fulfilment progress while preserving the original stock deduction.
Cancel a confirmed order	Automatically restores stock and records a RESTORED stock movement.
Update payment	Set pending, paid, failed, or refunded after checking cash, reference, bank transfer, or uploaded proof.

Payment review

- Each order displays the selected payment method, USD or SSP currency, submitted amount, SSP rate used, reference number, and payment proof link if provided.
- Payment proofs are stored outside the public website folder and can only be opened by signed-in staff.

Products and inventory

- Open **Products** to add categories, create or edit products, set USD prices, upload a product image, adjust stock, choose a reorder level, and set product status.
- Use an adjustment note whenever stock changes so the movement has a reason.
- Set a product to draft or out of stock when it should not be sold publicly.

Installation requests and reports

- Open **Installations** to review requests, contact the customer, and update the request from new to scheduled, in progress, completed, or cancelled.

- Open **Reports** for order totals, daily sales, monthly sales, inventory value, order status counts, and best-selling products.
- Use **Download CSV** in order management to export orders with customer, delivery, USD total, payment currency, payment amount, SSP rate, and status data.

3. System Functions and Safety

Function	How it works	
Guest checkout	Customers order without creating passwords or accounts.	Custome

Daily operating checklist

- Check new orders and pending payments at the start of the day.
- Confirm payment and stock availability before confirming an order.
- Update the customer order status as it moves through processing, ready, and completed.
- Record stock arrivals and adjustments in Products. Review low-stock alerts before running out.
- Update SSP_PER_USD in config/app.php whenever the local exchange rate changes.
- Back up the MySQL database before major changes or at the end of each business week.
